Help: Using the Read-only Timetable

Last updated: 5/6/2017

Future students and members of the public can access a public, read-only version of myTimetable to look up timetabling information. This document provides help for using that system, called the Read-only Timetable.

Searching

Search for an RMIT course by code or description.

Example: entering **Math** will list all courses starting with **Math** in either their code or description.

N.B. 'Subjects' refers to RMIT 'courses' or 'units.'

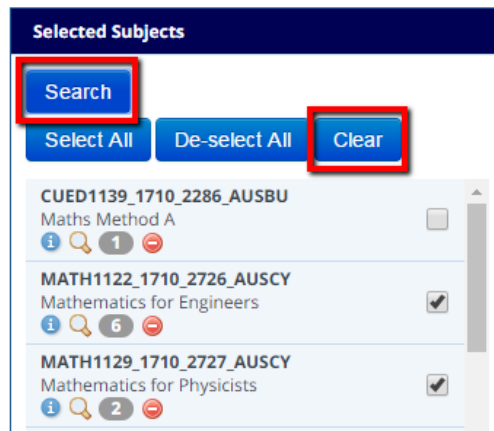

Here's how to interpret the subject code:

Edit or clear your search

Click **Search** to go back and edit your search.

Click **Clear** to clear your search filters and start over.

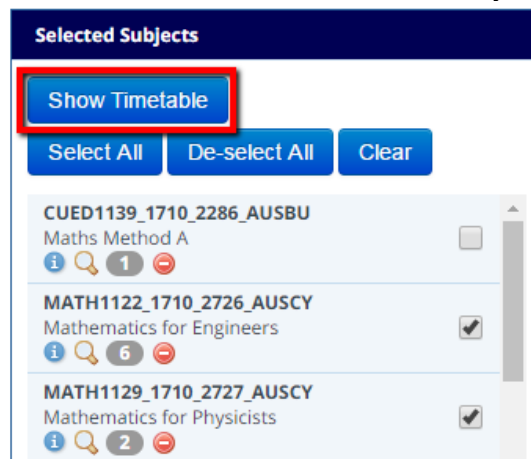

Using filters

You can narrow your results by using filters. Filter by Teaching Period, Campus or Faculty. Apply filters, then click **Search** to update results.

We recommend you apply a filter for **Teaching period** (refers to 'semester' or 'term') when searching. Otherwise it can make it look like there are clashes where none exist, given that many classes are taught across multiple teaching periods (i.e. multiple semesters or terms).

View timetable and class details

Click on **Show Timetable** to view the timetable for the classes you've selected.

The timetable displays in a colourful grid format. Key features are noted below.

Activity Details

MATH1129_1710_2727_AUSCY

Mathematics for Physicists

Activity Type	Lecture
Activity	01
Description	Mathematics for Physicists
Day	Fri
Time	10:30
Semester	1710
